

WATT'S NEW AT HUTT ELECTRIC

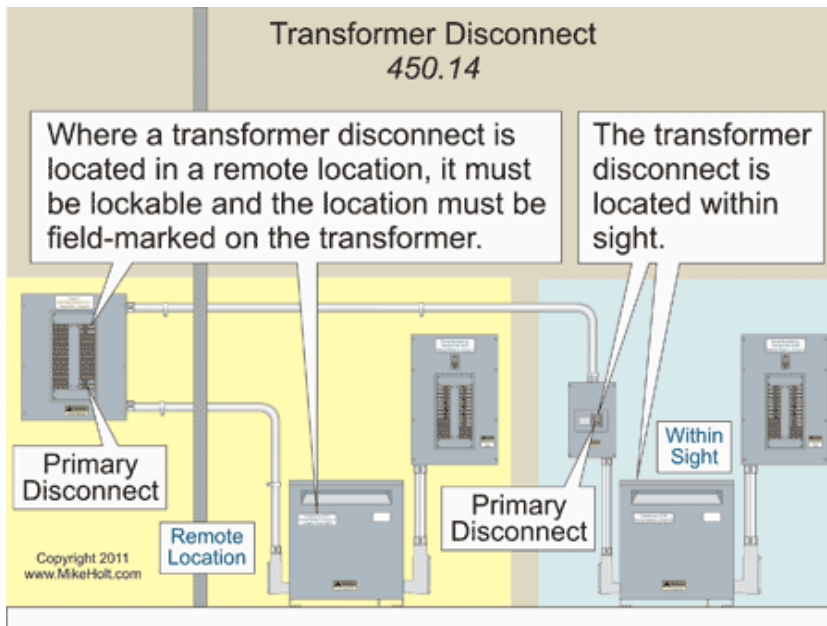

Welcome to our 200th
edition of our newsletter!
September 2011

"We're here to help you help your customers"

This newsletter will provide you, our customers, with information on new technologies, products, discontinuations, etc. in the electrical industry. It will also provide you with information on any projected price increases, price decreases, and any 'special buys' at Hutt Electric Supply.

NEC Code Questions and Answers.....

Q. What are the disconnecting requirements for a transformer?

A. A disconnect is required to disconnect all transformer ungrounded primary conductors. The disconnect must be located within sight of the transformer, unless the location of the disconnect is field-marked on the transformer and the disconnect is lockable [450.14], as shown in the **Figure**. This *new* Code requirement applies to transformers of any voltage, except Class 2 or Class 3 transformers.

Note: Within sight means that it's visible and not more than 50 ft from one to the other

All questions and answers are based on the 2008 NEC, taken from EC&M (http://ecmweb.com/nec/code_qa/)
