2011 Spiral edition: \$89.00 ea

Note: we also have ez-tabs available and in stock!

NEC Code Questions and Answers.....

Q. Is over current protection required for a panelboard?

A. Each panelboard must be provided with over current protection located within or at any point on the supply side of the panelboard [408.36]. The over current device must have a rating not greater than that of the panelboard. As noted in Exception No. 1 of this rule, individual over current protection is not required for panelboards used as service equipment in accordance with 230.71. When a panelboard is supplied from a transformer, as permitted in 240.21(C), the over current protection for the panelboard must be on the secondary side of the transformer. The required over current protection can be in a separate enclosure ahead of the panelboard, or it can be in the panelboard [408.36(B)].

All questions and answers are based on the 2008 NEC.
